

MI300A / ROCm 6.4.2: FP64 GETRF, diagonally dominant dense input
No pivoting; 3 trials; restoration excluded; shaded band = trial range

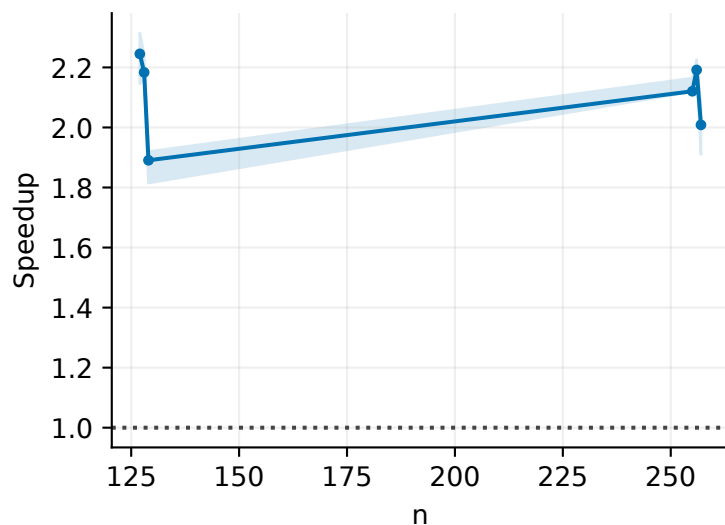

Tile / scheduling / dispatch boundaries

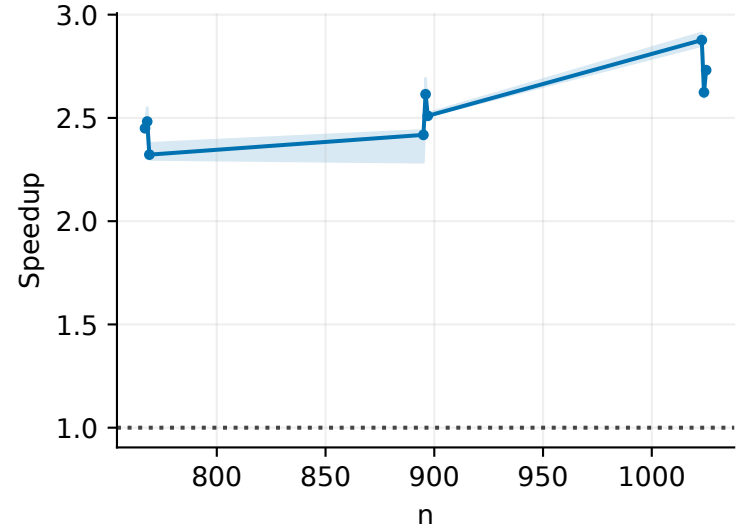

Single-tile transition

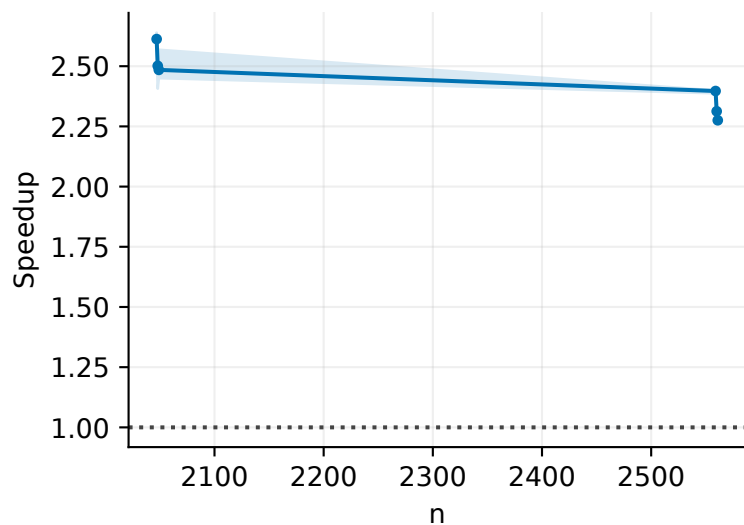

Tile-count transitions

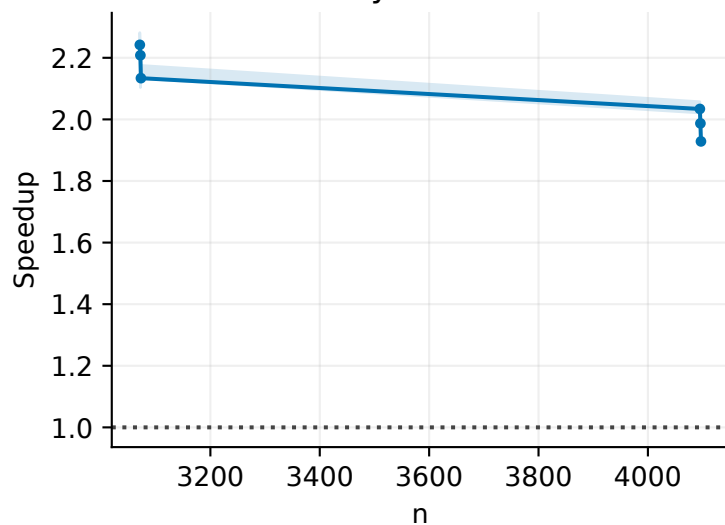

Lookahead activation

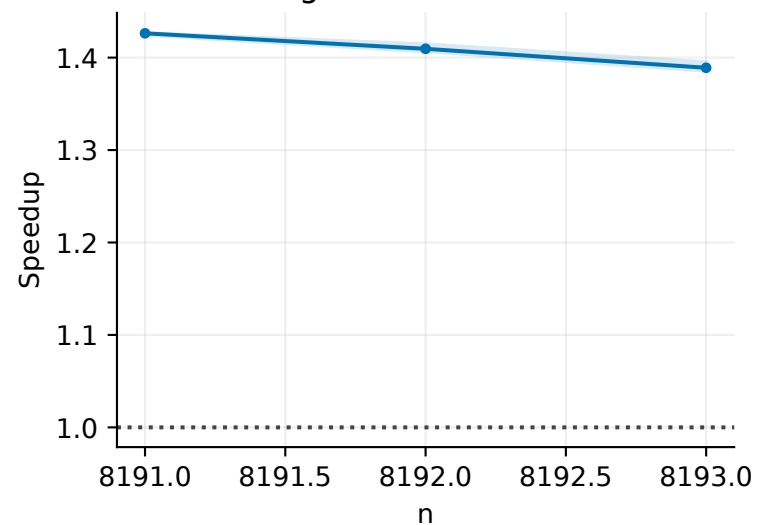

Wave-count transition

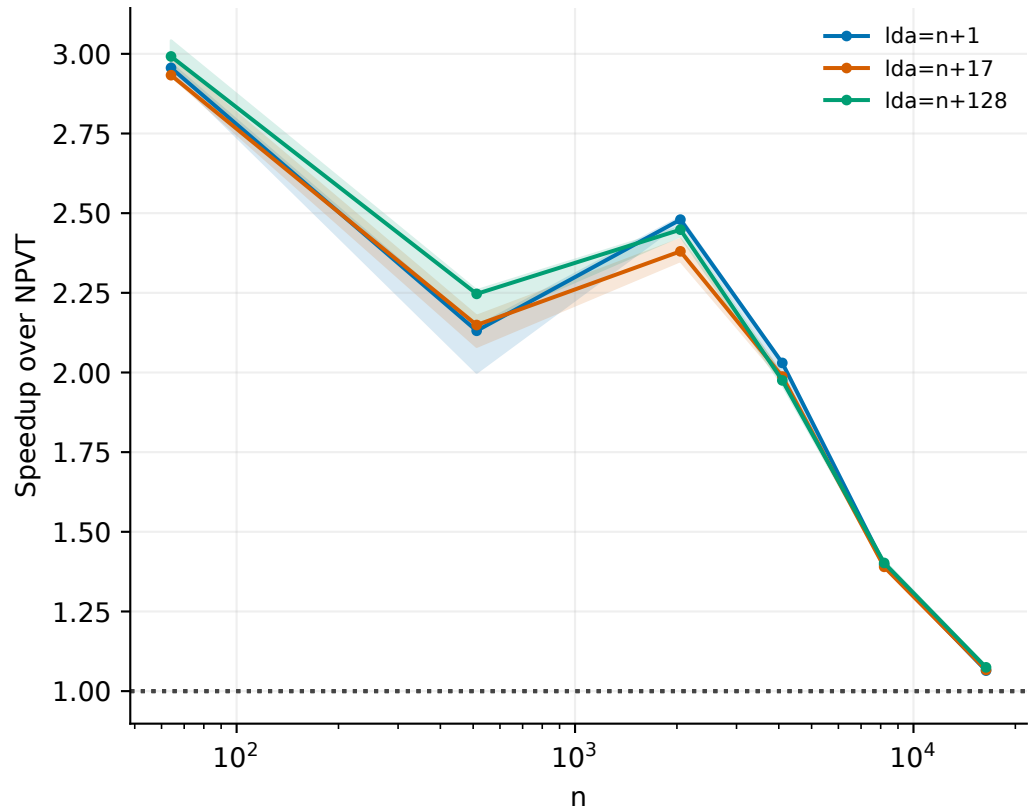

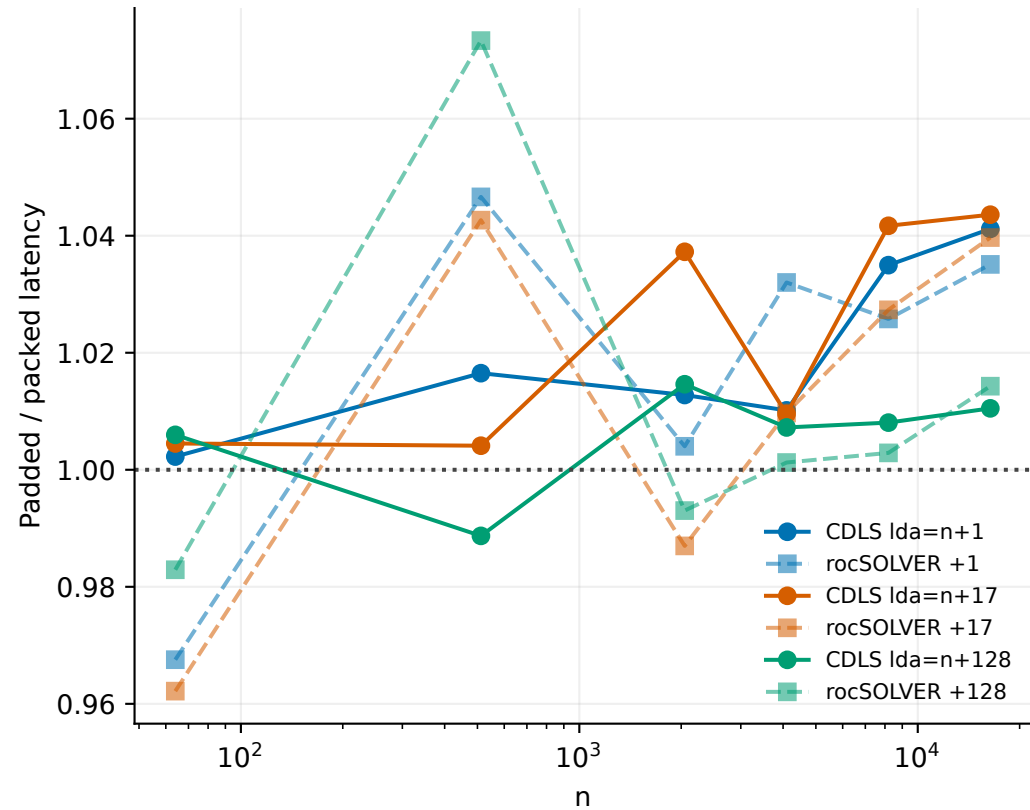

Fused / hybrid transition

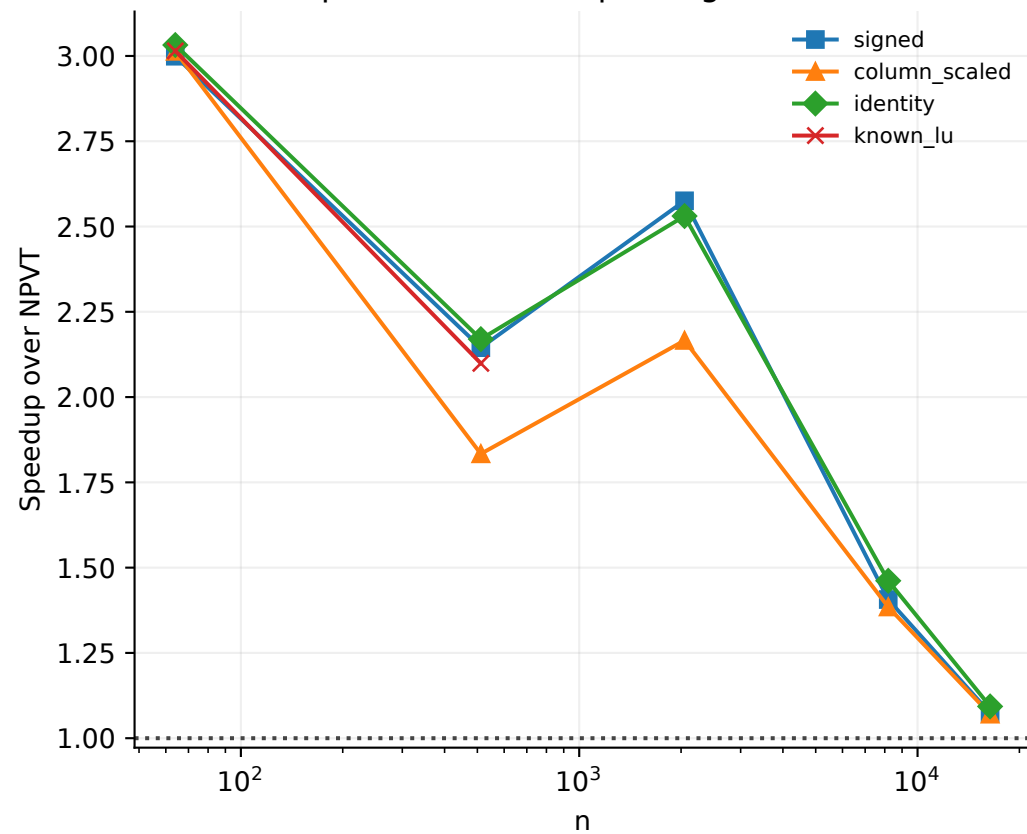

Large odd dimensions

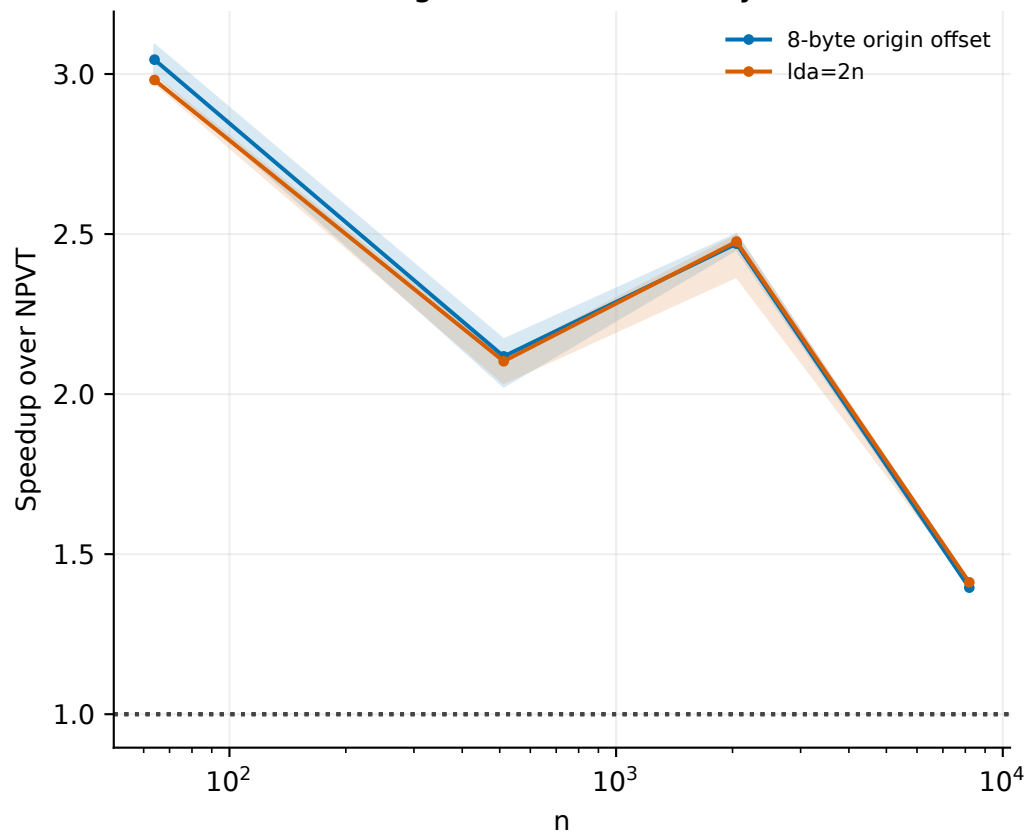

Leading-dimension sensitivity

Input families with passing residuals

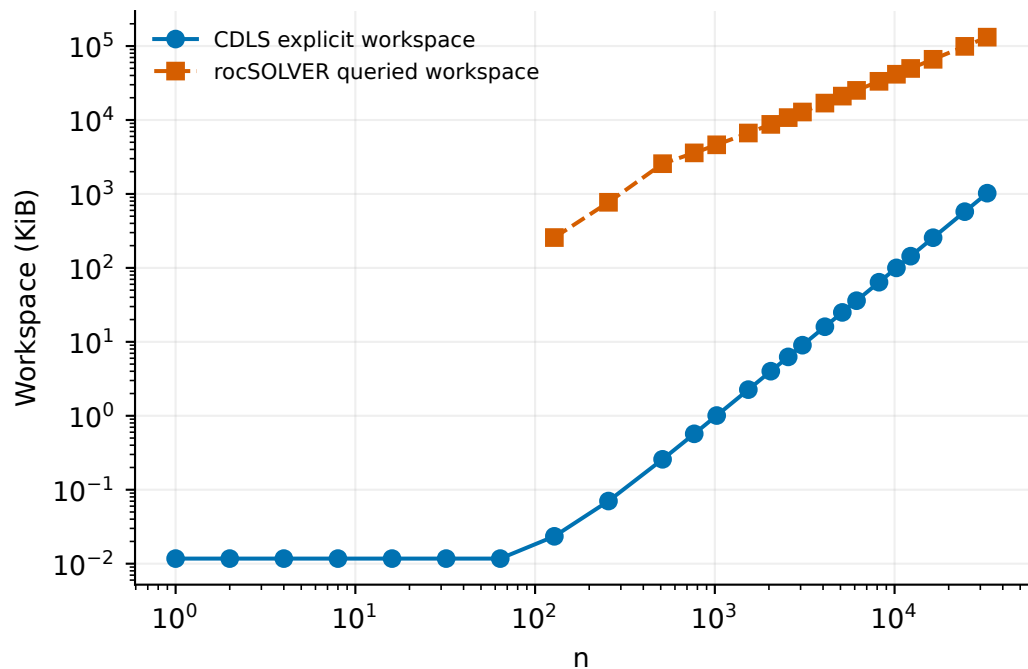

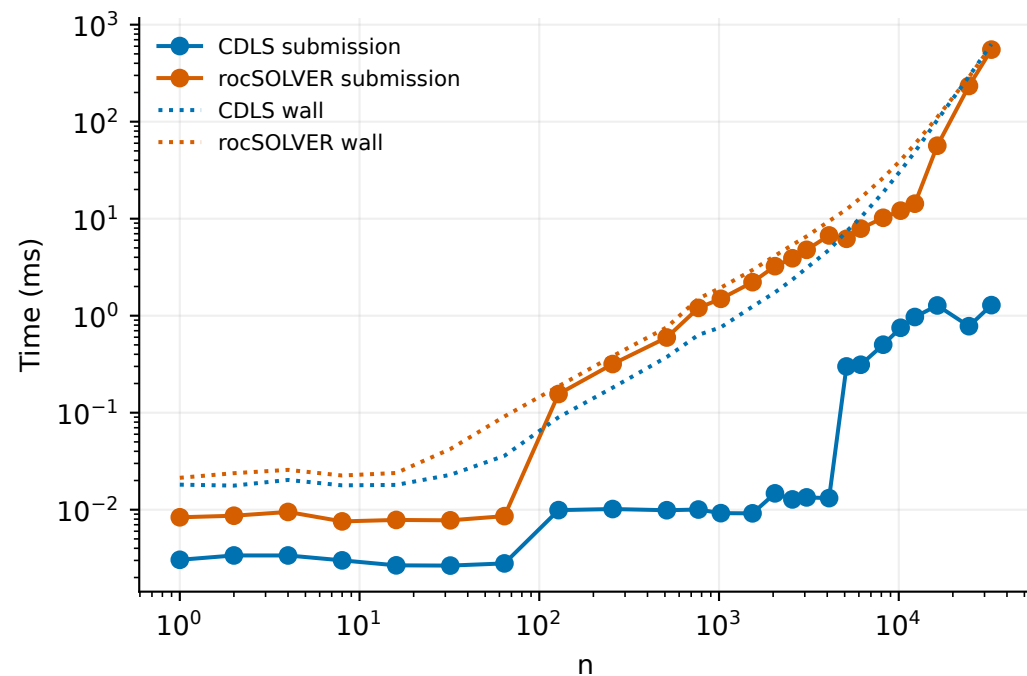

Origin / stride sensitivity

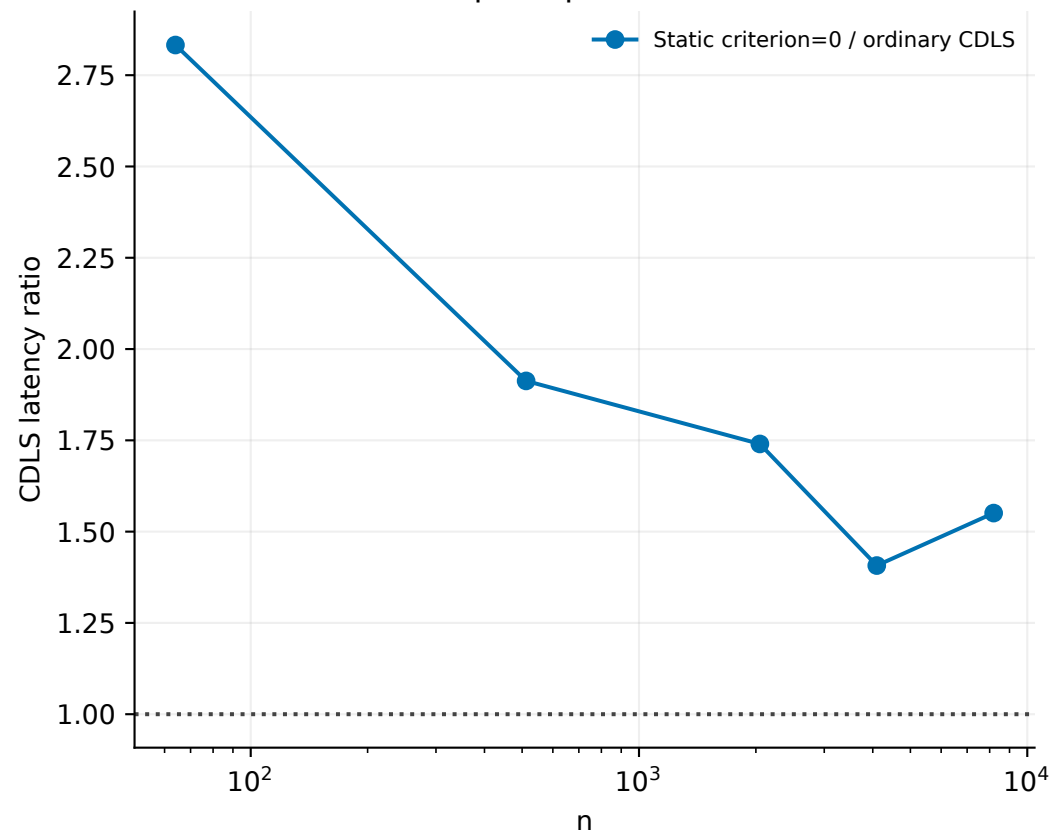

Host submission and workspace requirements

CDLS BLAS-handle allocations are additional to its explicit workspace

Static-pivot path overhead

Supplementary: different pivoting semantics
